Edmonton, February 18, 1921.

TO THE HONORABLE J. L. COTE,

Provincial Secretary.

SIR,—I have the honour to submit herewith the report of the Mines Branch of the Department of the Provincial Secretary for the year 1920, together with tables of statistics.

Respectfully submitted,

John T. Stirling,

Chief Inspector of Mines.

ANNUAL REPORT OF THE MINES BRANCH FOR THE YEAR ENDING DECEMBER 31, 1920.

An amendment was made to The Mines Act, at the 1920 Session of the Legislature, with respect to the payment of wages. This amendment, which became effective on May 17, 1920, provides that all wages earned by any person or persons employed in or about a mine from the first day to the fifteenth day of each month, both days inclusive, shall be paid on the last Saturday of the same month, and all wages earned from the sixteenth day to the last day of each month, both days inclusive, shall be paid on the first Saturday after the ninth day of the following month.

The explosive known as Miner's Friend No. 9 was admitted to the permitted list of Explosives on January 30, 1920, and the explosive known as Dynobel No. 4 was added on April 7, 1920.

The composition of these explosives is as follows:

MINER'S FRIEND, No. 9.

| 7 7 1 | Parts by | Weight |
|--|---------------------|-----------------------|
| Ingredients | Not more than | Not less than |
| Ammonium Nitrate Nitro-glycerine Sodium Chloride Woodmeal (dried at 100 C.) Moisture | $13 \\ 20.5 \\ 8.5$ | 58 11 18.5 7 |

DYNOBEL NUMBER 4.

| 7 | Parts by | Weight |
|--|----------------------------------|----------------------------------|
| Ingredients | Not more than | Not less than |
| Nitro-glyeerine Nitro-cotton Tri-nitro-toluol, Di-nitro-toluol, Di-nitro-benzol (together) Nitrate of Ammonium Woodmeal (dried at 100 C.) Chloride of Solium Carbonate of magnesium Moisture | 16 0.75 4 47 6 31 | 14 0.25 2 44 4 28 |

The explosive known as Dynobel Number 2 was taken off the permitted list of explosives on April 7, 1920.

During the year, 29 persons met with fatal accidents, as compared with 21 during the year 1919. Of these fatal accidents, 4 occurred above ground and 25 below ground. Nine persons were seriously injured above

ground, and 44 below ground, while 9 persons were slightly injured above ground and 29 below ground.

In addition to the inspections which have been made from time to time of the different mines by the District Inspectors, all fatal and serious accidents have been investigated, and all inquests attended.

Several samples of mine air were taken throughout the year by the District Inspectors as well as tests made by them with approved gas detectors.

With reference to lamps, 2,297 lamps of the Wolfe type, 3,154 electrical portable lamps of the Edison type, 35 of the Ceag type, 500 of the Wico type, and 71 of the Canadian General Electric type are in use. This shows an increase of 803 portable electric lamps in use over those used during the year 1919.

Training in connection with Mine Rescue and First Aid Work has been carried on satisfactorily during the year, there being six stations and three mine rescue cars at present in operation. On July 1 and 2, 1920, competitions in Mine Rescue and First Aid Work were held under the auspices of the Rocky Mountain Branch of the Canadian Institute of Mining and Metallurgy, at Drumheller. Full particulars of these competitions are given in the report of the Superintendent of Mine Rescue Work, which will be found in the annual report of The Workmen's Compensation Board for the year 1920. All Mine Rescue and First Aid Work is now being administered by The Workmen's Compensation Board.

There were 288 coal mines, 1 copper ore and 3 shale mines in operation during the year, 38 of which were opened, 12 re-opened, and 17 abandoned. In addition to those abandoned, 45 mines were temporarily closed.

Information was laid in 14 cases for contraventions of the provisions of The Mines Act, and 14 convictions obtained.

The number of persons employed during the month of December, 1920, was 12,347, being an increase of 320 over the number employed during the month of December, 1919.

The question of the marketing of Alberta coal has been receiving considerable attention. Mr. Howard Stutchbury was appointed Trade Commissioner, with headquarters at Edmonton, on May 15, 1920, and Mr. M. L. Hyde, with headquarters at Winnipeg, was appointed Combustion Engineer on August 30, 1920.

The production during the year 1901, for the whole of the North-West Territories, was 346,649 tons, while in 1920 it was 6,908,923 tons for Alberta alone. The amount of coal produced during the year 1919 was 5,022,412 tons, so that during the year 1920 there was an increase of 1,886,511 tons.

Notwithstanding this increased production, there is still a considerable amount of coal being imported from the United States into territory which should be supplied entirely with Canadian coal. It is estimated that the possible market for Alberta coal in the provinces of Manitoba. Saskatchewan and Alberta is approximately 9,000,000 tons per year. In

addition to this a considerable market is being developed in British Columbia and in the United States immediately south of the International Boundary.

There were 13,911 tons shipped into the province of Ontario during the year, and it is expected that a large increase will take place in the near future in the amount of coal shipped into this province.

During the month of November, 1920, 803,745 tons of coal were produced, which means that the mines in operation are capable of producing over 9,000,000 tons per year with the present labor, development, equipment, and plant. It will, therefore, be seen that we are in a position to produce over 2,000,000 tons per year more than we are at present finding a market for.

The question of the preparation and screening of coal requires greater attention than it has had in the past. A large number of complaints have been received from consumers and unfortunately these complaints have in a number of instances been justified. While more care should be exercised by the miner at the working face as to the condition in which he loads his coal into the mine car, this does not relieve the mine operator of the responsibility of seeing that all coal is shipped in as satisfactory a condition as possible.

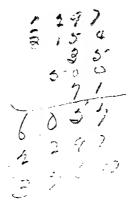

Experiments are being carried on at the University of Alberta for the purpose of ascertaining what would be a proper classification for Alberta coal, and the best methods of storage and screening. A report in connection with this work will be found by referring to the First Annual Report of the Advisory Council of Scientific and Industrial Research of Alberta.

During the year 1920, 6,371,266 tons of coal produced in Alberta were sold, for which an expenditure of \$19,301,065.09 was made, making a total cost for labor alone throughout the province of \$3.03 per ton.

Of the total amount of coal produced in Canada during the year ending December 31, 1920, Alberta produced 40.7 per cent.

On April 29, 1920, an Order-in-Council was passed transferring the control of The Mines Branch from the Minister of Public Works to the Provincial Secretary.

I herewith attach reports from Mr. Stutchbury and Mr. Hyde with reference to marketing of Alberta coal.

Edmonton, February 12, 1921.

SIR,—On my appointment to the position of Trade Commissioner for the Province of Alberta on May 15, 1920, I was instructed to make a study and survey of the possibilities for extending the market of Alberta coal, more particularly in the Province of Manitoba. I immediately proceeded to Winnipeg, and discussed the matter with the Fuel Dealers, Board of Trade, Citizens' League, City and Government officials, and others, for the purpose of ascertaining why so large a tomage of American coal was purchased by the consumers of coal in Winnipeg and Manitoba.

I found in many quarters a very strong prejudice against western coal among both domestic and steam users. This prejudice was very largely caused through an entire lack of knowledge of the various qualities of coal obtainable in Alberta, and more particularly through lack of proper knowledge of combustion.

Quite a number of people whom I met were of the opinion that all Alberta coal was very low grade lignite, not capable of generating steam, and exceedingly dangerous for household use.

Many people who had used our coal during 1918 when under Federal Fuel Regulations (which made it compulsory to purchase one ton of western coal with each ton of American coal) and not having knowledge of the proper methods of combustion, found Alberta coal unsatisfactory, and reverted to American coal in 1919, when it was again made available.

It was, therefore, deemed advisable to enter into a carefully planned and vigorous campaign of advertising, drawing the attention of the people of Manitoba and Saskatchewan to the enormous coal resources of Alberta, and also to their high combustion qualities. In addition, the consumer was urged to purchase coal during the summer, so as to relieve congestion on the railways during the grain hauling season.

The Citizen's League, Fuel Dealers, and other public bodies in Winnipeg gave their very heartiest support to this campaign, which has resulted in not only breaking down prejudice which was heretoforc existing, but also increasing the tonnage into that market very materially.

It is interesting just here to compare the figures of 1917, 1918, 1919, and 1920, of shipments into Manitoba from this field.

In 1917 the tonnage (railway coal not included) 249,872 In 1918 the tonnage (railway coal not included) 511,168

(During 1918 the Federal Government Fuel Controller ordered that the people of Manitoba must purchase one ton of western coal for every ton of American coal they desired.)

1919 314,290 tons

(The compulsory order was off during this year and no educational eampaign had been carried on.)

1920 600,962 tons

(This was not on a forced market but is the result of educational eampaign and shows a satisfactory increase.)

It quite early developed while in Winnipeg that there was not a complete understanding between the fuel dealers and the coal operators of this Province, and a convention of the dealers of the three western provinces was called to meet with the operators for a full and frank discussion of the coal trade and its possibilities for development. The convention was held in the City of Calgary on August 19 and 20, and was most successful, a very representative gathering of both dealers and operators. The discussion was very free, frank, and entirely harmonious, and I believe the meeting resulted in the establishment of a much more complete understanding between the fuel-dealers and the operators.

Both dealers and operators expressed their appreciation of the Government for what it was trying to do, and this expression was moved by Mr. L. E. Drummond, of Edmonton, in the following resolution:

"This Convention of coal-dealers of the three western provinces, meeting with the Alberta operators, wish to place on record its appreciation of the Alberta Government and the Hon. J. L. Cote, Minister in charge of the Mines Branch, for the calling of this convention and for their efforts in extending the market for Alberta coal; also for the research programme which is now being conducted on western coal."

Mr. Whiteside, President of the Western Coal Operators' Association, in seconding the resolution, stated that while the operations of the Government were comparatively recent, the results so far obtained had been beyond their expectations, and agreed with Mr. King of Winnipeg (a previous speaker) that actual demonstration, coupled with newspaper advertising, would do a great deal to overcome the prejudice in the minds of Manitoba consumers.

Mr. M. L. Hyde was appointed as Resident Combustion Engineer, in Winnipeg, during the month of August, and his services were placed by the Government at the disposal of both the Fuel-dealers' Association and the consuming public. Mr. Hyde, since that time, has been very active in attending to various calls that have been made on him, and has visited and worked with a very large number of the Plant Engineers, and established a personal contact between the Engineers and the Government such as would not have been possible in any other circumstance.

About October 1 a Fuel Demonstration Plant was opened at 277 . Smith Street, right in the heart of the business district. Public demonstrations are held daily, demonstrating proper methods of firing Alberta coal. These demonstrations have been very popular and largely attended, and very much good has resulted.

For the further direct education of the consumer, there have been published and distributed a bulletin on combustion and three illustrated cards for domestic coal-users and janitors, giving simple and explicit instructions as to the proper methods of burning Alberta coals. Enquiries for this literature have been received from all parts of Canada, and even from the Border States.

During the month of September, exhaustive tests were made in the Central Heating Plant of the Manitoba Government. These tests were in competition with Youghigheny coal from Pennsylvania. The results were very highly satisfactory for Alberta coal. Copy of the economic results is attached.

After the tests were completed, a meeting of the Chief Operating Engineers of Winnipeg was called. This meeting was held in the Fort Garry Hotel, and 103 Engineers were present. Addresses were given by the visiting Engineers from Alberta, and a round table conference ensued. The interest was such that the meeting lasted until almost midnight, and gave the Government, through the Trade Commissioner, a very fine opportunity of personally discussing the various problems with the men who are directly responsible for the purchase of coal.

Many enquiries have been received this year from Ontario and Quebec relative to the shipping of Alberta coal to far east points, but so far the freight rates have been prohibitive for this field. It is interesting to note, however, that there have been shipped into Ontario almost 14,000 tons since June. There is no doubt that a very large market east of the Great Lakes would be developed for our higher grade coals if a reasonable freight rate could be secured.

The policy of this Department has been to develop, as far as possible, geographic markets, and to that end a study was made of the possibilities for shipping coal into British Columbia.

In a recent trip to Prince Rupert it was found that a very large tonnage could be developed along the line between Edson and Prince Rupert and the coast plants, both mining and fishing, off the coast from Prince Rupert.

A conference was held with Mr. A. E. Warren, General Manager of the Canadian National Railways, with a view to having bunkering facilities placed at Prince Rupert, and a promisc from him was received that such would be done.

The matter of special freight rates for coast points is now under advisement.

The development of the industry this year has more than proven the importance of an educational and publicity campaign as the following figures will show:

The production of coal for 1919 was 5,022,412 tons and for 1920, 6,908,923 tons; which is an increase over 1919 of 1,886,511 tons.

Respectfully submitted,

HOWARD STUTCHBURY.

Trade Commissioner.

ECONOMIC RESULTS of Boiler tests made at Manitoba Government Central Heating Plant, Winnipeg, September, 1920. Under direction Trade Department, Mines Branch, Government of Alberta.

ENGINEER IN CHARGE—

E. H. Oliver, Chief Engineer, Alberta Government plants.

Assisting—

Jas. R. McCall, Superintendent Power Plants, City of Calgary.

C. R. Robb, Professor Mechanical Engineering, University of Alberta.

G. R. Pratt, Combustion Engineer, Canadian Pacific Railway.

H. Stutchbury, Trade Commissioner.

Assisting for Government of Manitoba-

T. M. Power, Chief Engineer, Central Power House. Duncan Reid, First Engineer.

F. H. Weakley, Shift Engineer.

Type of Boilers-B. and W. Water Tube. Method of Firing—B. and W. Chain Grate Stoker (standard). Builders' Rating—250 h.p.

| | Kind of Coal | Cost per 1000 lbs. evaporation from and at 212% | H.P. Developed per hour | Percentage of Builders' Rating |
|----|----------------------------|--|-------------------------------|--------------------------------------|
| 1. | Lethbridge, spiralized pea | \$0.660 | 365 | 142 |
| 2. | Nut slack, Newcastle | 0.756 | 247 | 98.9 |
| 3. | Hillcrest, slack | 0.859 | 288 | 115 |
| 4. | Youghigheny, slack | 0.874 | 269 | 108 |

| 6. | Saunders Creek, slack | 0.910 | 312 | 125 |
| 7. | Mountain Park, slack | 0.934 | 257 | 103 |
| 8. | Pembina, nut and pea | 1.966 | 187 | 74.6 |

WINNIPEG, FEBRUARY 14, 1921.

Sir,—This report is respectfully submitted as a resume of the activities of The Mines Branch of the Province of Alberta in its efforts to secure a permanent hold on the Manitoba Steam and Domestic Coal markets. In it the writer has endeavored to give such information and data as will enable the Alberta Government and the Alberta Coal Operators to join forces along the most efficient lines; with a view of holding the very favorable tonnage they are now supplying Manitoba.

Appreciating the opening offered Canadian coals due to the American fuel shortage and prevailing high prices, the Province of Alberta started a preliminary advertising campaign as early as 1917. Results were so gratifying that in the spring of 1920 educational as well as advertising work was undertaken. In August of that year, the writer was appointed to act as Combustion Engineer, with headquarters at Winnipeg. His instructions were to work through and in harmony with the Winnipeg Retail Coal Dealers' Association, and to educate both the domestic and steam coal-buyer in the use of Alberta coals.

THE DOMESTIC COAL SITUATION.

Up to as recent a date as 1917, Manitoba had used practically no domestic fuel other than Anthracite, Coke, and a very inconsiderable amount of Souris coal.

In order that the difficulties encountered in winning this market for our domestic coals may be better appreciated, it will be of interest to know just what this competition represented.

American Anthracite, or hard coal, as sold in Winnipeg, averages 12 per cent. ash. It burns slowly, in a glowing mass of great heat and without flame or smoke. While hard to ignite, it holds fire over long periods, is dustless, and has practically no breakage in handling. It will hold fire for a given length of time in a smaller fire-pot than can be used for any other type of fuel, and the majority of the earlier types of house-heaters were designed and rated for its use.

The coke sold in Winnipeg comes from gas retorts operated by the Winnipeg Electric Railway Company, and is made from American Youghigheny Gas Coal. It carries about 10 per cent. ash, and has very much the same burning characteristics as Anthracite, except that a larger fire pot is required, owing to its bulkiness. About 60,000 tons are imported each year for coking.

Souris is a low grade lignite, mined in southern Saskatchewan. It is sold on a price basis only, and offers no serious competition.

Hand-firing Alberta coal calls for an entirely different process from that used with anthracite or coke. In order to educate the public in the shortest possible period of time, a demonstration room was opened in October, in the heart of the shopping district. Five representative types of heaters were installed, with a practical demonstrator on the floor to fire them. Bins, with samples of all representative domestic coals, and signs, giving their relative values, were also put in. A strong advertising campaign is used to keep up public interest, and excellent results were obtained. Each visitor is given a practical lesson in firing his particular type of furnace, also a card of instructions to be hung in his basement.

Winnipeg dealers are unanimous in their praise of the work accomplished by this demonstration. If maintained, there is small doubt but that our domestic coals will hold a good portion of the Winnipeg market permanently.

Western Domestic Coal Operators are to be congratulated on the hearty co-operation they have rendered the Province by their exercise of care in shipping only their best prepared products into this market.

THE STEAM COAL SITUATION.

Prior to the spring of 1920, Winnipeg had not used our steam coals to any extent. Most heating and power plants were designed for American smokeless coals, either anthracite or Pocahontas, though a great deal of Youghigheny, New River, and Miller's Creek was in demand.

It is even more essential that the difficulties encountered in the steam market be appreciated. Here we deal with experts familiar with coal values, who must be satisfied as to grading, heat units, and ash content of all coals they contract for—the same as the railroads. In giving Manitoba part of their output, the mines had to ship exactly the same grades the railroads were taking—they could not possibly change their equipment to make a special commercial coal—nor did they have the labor to do so, had the equipment been available.

In criticising Western coals, it must be remembered the operators, in most cases, gave Winnipeg the best they could; but their best, during these abnormal times, was in no way representative of what they could offer under normal conditions, and the consumer made his comparisons on pre-war American as against Western coals mined under severe difficulties.

The writer feels that there is a strong brief to be held for the West-ern operator; he did his level best, except in a few instances where some salesmen took gross advantage of Winnipeg dealers.

In Winnipeg are established branches for several large American coal operations. These are owned by American capital, and Alberta can expect no co-operation from them. One company, the largest in Winnipeg, and owned by Americans, stocked heavily coals from the Yellowhead district and sold them as representative bituminous of the highest grade, under the trade name of Western Star. They showed on analysis, 19.71 per cent. ash and represent a poor sub-bituminous, entirely unsuited for the Winnipeg steam market. The public, when they complained, were advised this coal was a typical sample, and asked to bear with it until American coals returned. The writer, immediately he discovered the means this concern was taking to damage Western coals, took every step to enlighten the public direct, and most of the damage intended was averted.

Such practices have been used greatly to the detriment of our good name, and they must be stopped at all costs.

Before going further, competitive coals and their preparation should be understood. The Manitoba market has always proven a good outlet for American coals when the home market was slack. By means of docks at the head of the Lakes a haven was offered to mines which would otherwise have had to shut down. The large operators therefore equipped their own docks at Duluth, Superior, Toledo, and such points with the most modern coal handling machinery known; stocked only their finest low ash coals, and sold them in Manitoba through their own organizations. They backed their coal with guarantees and the highest technical services.

Youghigheny

The Pittsburg Coal Company offers Winnipeg two different grades of this coal. The straight gas from the thin veins near Pittsburg (this runs under 1 per cent sulphur and is used by the Winnipeg Electric Railway in its gas house retorts) and steam coal from its mines in the Panhandle district. The latter is too high in sulphur for gas making, and is sold only for steam purposes.

All these coals are shipped from the mines over a %-inch screen. While very hard, and able to resist severe treatment, from 35 to 40 per cent. breakage occurs by the time they are in storage at the dock. Here the coal is all rescreened over either %-inch or 1%-inch screens, to suit purchaser.

Pocahontas.

This is a semi-bituminous coal, known to the trade as smokeless, and comes from West Virginia. Pocahontas is shipped from the mine as Run of Mine, but, owing to its friable nature, contains at least 75 per cent. screenings by the time it reaches storage at the dock.

Large quantities of New River Coal from the White Oak Coal Company also reaches the Manitoba market.

Other American coals are Miller's Creek, or No. 8, and Elkhorn.

As soon as navigation opens in the spring, all the above will be put on the docks in large tonnages—there is no question about this. We also know that the approximate cost F.O.B. Winnipeg will be as follows:

| Youghigheny, F.O.B. mine, minimum Freight, mine to Lake Erie Freight, across Lakes to Canadian docks | \$ 3.00 1.91 .60 |
|--|----------------------------|
| American exchange, 20 per cent | 5.51 1.38 |
| Cost in Canadian currency Duty Handling at dock Freight, dock to Winnipeg | 6.89 .53 .75 3.30 |
| Cost to Winnipeg dealer | \$11.47 |

NOTE: Pocahontas may be estimated at \$2.50 more than Youghigheny owing to additional freight charges, and increased price F.O.B. Mine.

These prices cover Run of Mine. The duty on slack is 14 cents in place of 53 as given above.

With this information, and the expectation of a system of grading, our course for next year's campaign is fairly clear. Out of the \$11.47 total cost, \$7.87 covers transportation, against \$5.30 for Western Steam coal—a differential in their favor of \$2.57. While American operators

are insistent that legislation be enacted introducing the seasonal freight rate plan, an as incentive to summer storage, if this were done we should surely expect proportional rates here.

Our mine price will have to be on a B.T.U. basis of commercial coal graded to compete with Youghigheny. Run of Mine coal must carry all the clean lump that comes from the mine, must be free of cap rock, not over 15 per cent. ash, and of a coarseness that 40 per cent. will pass over a ½-inch screen.

By loading coal only from sections of the mine known to be of standard quality and hardness, and by careful picking on the surface, these requirements can be fully met.

Other points Western Operators should take into consideration:

(1) Overcoming prejudices now in existence, due to treatment of the public during past year.

This can be done only by proper guarantees as to quality, and grading F.O.B. Winnipeg.

Removing ash from Winnipeg plants costs \$2.50 per load of about two tons. This represents 12½ cents on every ton of coal purchased for each 10% variation in ash, not taking into account the additional labor in the boiler room, nor the \$5.30 per ton freight, plus dealers' fixed charges. This is a serious factor, and the operators should appreciate it.

- (2) Selling on consignment, or on a special summer price with the payments falling due in November and December.
 - (3) Selling on a scale of discounts according to tonnage.

At present the purchaser of one car gets exactly the same price as the man buying one hundred.

In his work towards winning next year's market the writer has received invitations to conduct tests at the steam plant of T. Eaton & Company, representative heating plants of the School Board, Oldfield Kirby and Gardner, and the General Hospital, and the Gas Plant of the Winnipeg Electric Railway Company. The combined tonnages of these purchasers is close to 100,000 and results obtained in their plants receive the broadest mention.

Special cards of instructions for burning steam coals under different types of boilers have been distributed to all plants, and weekly lectures given to different groups of firemen in the plants of the larger employers. Articles on Western coals are being furnished such magazines as reach buyers throughout the Prairie Provinces, and in every way at his command the writer is endeavoring to win as large a portion of the Manitoba market for Alberta coals as possible.

The work as planned for 1921 contemplates carrying on the present educational campaign with steam coal purchasers and their employees; a close follow-up of all architects and building contractors, with the object of using every influence towards obtaining the installation of suitable furnaces for western coals in all new buildings and in all overhauling of present plants; a watch on all dealers during contract placing season, to the end that every influence may be exerted towards getting

them to buy as heavily from Alberta as possible; a personal check on shipments of Western coals, including destination, analysis and quality of grading (this will enable the Province to protect the buyer in all cases where operators are not shipping suitable coals); competitive boiler trials against American coals.

In order that first-hand information might be available as to just what co-operation the Province could expect from the Steam Coal Operators, the writer made a personal visit to all the mines in the Crow's Nest Pass. Assurance was given by both the operating and sales department of all these mines, also Mountain Park and Cadomin, that they would use every means in their power towards carrying out the program outlined.

A joint meeting, to be held the middle part of February, 1921, in Winnipeg, between operators and dealers was arranged and the operators have all promised to attend. At this meeting the dealers will be given first-hand information as to what difficulties, both labor and natural, Western coals have to contend with; and operators will be brought in direct touch with the competitive conditions they must meet. The results of such a conference should lead to harmony on both sides; if it does, the campaign is certain of success.

The Demonstration Room should be kept on.

The following figures are of interest in showing the tonnages used on the Manitoba market:

| Alberta Domestic Alberta Steam Alberta Anthracite | 1919 270,467 42,547 1,276 | $1920 \\ 456,404 \\ 143,202 \\ 1,356$ |
|--|------------------------------------|---------------------------------------|
| | 314,290 | 600,962 |
| American Anthracite American Steam American Smithing | 383,737 401,958 11,406 | 255,000x 235,000x 10,000x |
| | 797,101 | 500,000x |
| Totals | 1,111,391 | 1,100,962 |

Note: Figures marked "x" are rough estimates only. Figures on American shipment cover coals entering Canada via the docks at Fort William, Westfort, and Port Arthur; and do not include railroad coals.

Yours truly,

M. L. HYDE.

Combustion Engineer.

The total value of the mineral production of Canada for the year ending December 31, 1920, was \$217,775,080. The figures contained in this table were compiled from information obtained from the Department of Mines, Ottawa.

ANNUAL CONSUMPTION OF COAL IN THE DOMINION OF CANADA.

The following table is taken from a report issued by the Department of Mines, Ottawa, for the year 1919:

| Calendar | Canadia | ın | Importe | ed | | Per |
|--------------|------------|------|------------|-------------|------------|--------|
| Year Year | Short Tons | % | Short Tons | % | Total | Capita |
| 1886 | 1,595.950 | 45.9 | 1,884.161 | 54.1 | 3,480,111 | 0.758 |
| 1887 | 1,848,365 | 45.7 | 2,192,260 | 54.3 | 4,040,625 | 0.871 |
| 1888 | 2,013,925 | 37.8 | 3,314,353 | 62.2 | 5,328,278 | 1.137 |
| 1889 | 1,992,988 | 44.4 | 2,490,931 | 55.6 | 4,483,919 | 0.946 |
| 1890 | 2,360,196 | 47.8 | 2,581,187 | 52.2 | 4,941,383 | 1.031 |

The following tables give particulars with reference to the coalmining industry in the Province of Alberta, for the year ending December 31, 1920:

SUMMARY OF STATISTICS.

| \mathbf{Number} | of short tons of coal produced | 6,908,923 |
|-------------------|---|-----------|
| Number | of short tons of briquettes produced | . 101,693 |
| Number | of short tons of coke produced | . |
| Number | of short tons of shale produced for making bricks | 24,599 |
| Number | of coal mines in operation during the year | 288 |
| \mathbf{Number} | of copper-ore mines in operation | . 1 |
| Number | of shale mines in operation | |
| Number | of mines opened | . •38 |
| \mathbf{Number} | of mines re-opened | . 12 |
| | of mines abandoned | |
| | of mines closed, but not abandoned | |
| Number | of coal mines in operation at December 31, 1920 | 226 |
| Average | number of persons employed above ground | 3,137 |
| Average | number of persons employed below ground | 6.551 |
| Number | of separate accidents causing loss of life | 29 |
| Number | of deaths caused by accidents above ground | . 4 |
| Number | of deaths caused by accidents below ground | . 25 |
| Number | of serious accidents above ground | . 9 |
| \mathbf{Number} | of serious accidents below ground | . 44 |
| Number | of slight accidents above ground | . 9 |
| Number | of slight accidents below ground | 29 |
| Number | of persons prosecuted under The Mines Act | . 14 |
| \mathbf{Number} | of provisional overmans' certificates issued during 1920 | 191 |
| Number | of Third Class Certificates issued during 1920 | 75 |
| Number | of Second Class Certificates issued during 1920 | 25 |
| Number | of First Class Certificates issued during 1920 | · 3 |
| Number | of Mine Surveyors' Certificates issued during 1920 | . 7 |
| Number | of Mine Rescue Certificates issued during 1920 | 188 |
| Total N | umber of Third Class Certificates issued to December 31, 1920 | 663 |
| Total N | umber of Second Class Certificates issued to December 31, 1920 | 314 |
| Total N | umber of First Class Certificates issued to December 31, 1920 | 199 |
| | umber of Mine Surveyors' Certificates issued to December 31, 1920 | |
| Total N | umber of Mine Rescue Certificates issued to December 31, 1920 | 743 |

In the following tables the short ton of 2,000 lbs. is used in all cases.

| Year | Output in tons For N. W. T. Alberta and Saskatchewan | Output in tons Alberta |
|------|--|------------------------|

^{*}Includes outputs from Alberta and Saskatchewan.

During the year 1909, a strike affecting all the larger mines in the Province

lasted for a period of three months.

During the year 1911, a strike affecting all the larger mines in the Province lasted for a period of eight months.

During the year 1917, a strike affecting all the larger mines in the Province lasted for a period of three months.

During the year 1919, a strike affecting all the larger mines in the Province lasted for a period of three months.

The following table shows the outputs of the different districts for the years 1919 and 1920:

ELECTRICITY.

The Rules for the Installation and Use of Electricity in or about mines require a return to be made to the Department on or before January 21st, of each year, giving size, type, and any other particulars which may be required of electrical apparatus in use above and below ground. According to the returns received from the different mines, electricity was used in 45 different mines in 1920. A summary of these returns regarding the horse-power of electrical apparatus in use is given below.

| Districts | No. of Mines using Electricity | Horse-Power Electrical Apparatus in use | | Total |
|-----------------------|---|---|------------------|--------------------|
| | | Above ground | Below ground | power |
| Crow's Nest Pass | 6 | 3,412 | 810 | 4,222 |

This table is useful to show, by comparison with other years, the growth or decline in the use of electricity in the Province as a whole, and in each district taken separately.

The number of electrically driven coal-cutting machines in use at the end of the year was thirty-five.

COAL-CUTTING MACHINERY.

FATAL ACCIDENTS

The fatal accident which occurred to Fred A. Salzer, on January 5, in the mine operated by the Rose-Deer Coal Mining Co. Ltd., near Wayne, was caused by a fall of rock. He was loading coal at the face of No. 5 room, when a piece of rock dropped out of a pot-hole in the roof, striking him on the head, causing injuries from which he died five hours later.

The fatal accident which occurred to Herbert D. Donaldson, on January 7, in the mine operated by the Rosedale Coal Co. Ltd., near Rosedale, was caused by a fall of coal. He was loading a car in pillar workings when a piece of top coal became dislodged, and fell on him, injuring him internally, causing instant death.

The fatal accident which occurred to David Morris on January 14, in the mine operated by the Humberstone Coal Co. Ltd., near Beverly, was caused by his being crushed between the skip and the side of shaft. He was stepping into the skip before the return signal had been received from the engineer on the surface, the skip was hoisted, catching him between it, and the side of the shaft, killing him instantly.

The fatal accident which occurred to Albert Crock, on January 30, in the mine operated by the Canadian Pacific Railway Company, Department of Natural Resources, near Lethbridge, was caused by his being crushed between loaded cars and the side of the entry. He was engaged as a gripper on endless rope haulage, bringing a trip of twenty-eight loaded ears, when thirteen became uncoupled from the trip; he started these cars to connect with the trip, and in passing around a curve they bumped and became derailed, crushing him against the side of the entry. He died from the effects of the injuries half an hour later.

The fatal accident which occurred to John Sarc. on February 11, in the mine operated by the Saunders Creek Collieries Ltd., near Saunders, was caused by a fall of rock. He was preparing to take down a piece of overhanging rock, when a piece broke off striking him on the head, causing injuries from which he died shortly after.

The fatal accident which occurred to Harry Zarth, on March 12, in the mine operated by the Western Gem Mining Co. Ltd., near Drumheller, was caused by a fall of rock. He was operating an electric coalcutting machine, and had just changed the jack bar, when a piece of rock fell from the roof onto his back, breaking his spine and causing internal injuries, from the effects of which he died seven hours and a half later.

The fatal accident which occurred to Malcolm McNeil, on March 26, in the mine operated by the Hillcrest Collicries Ltd.. near Hillcrest, was caused by his falling in front of a loaded car. He was driving a horse hauling a trip of four loaded cars, and in some manner fell in front of the first car. When found, he was under the car, his skull being fractured; also receiving internal injuries from the effects of which he died while being removed from below the car.

The fatal accident which occurred to C. N. Ferguson, on March 31, in the mine operated by the Elgin Coal Co. Ltd., near Drumheller, was caused by a fall of rock. He was operating an electric coal-cutting machine, when a piece of rock fell from the roof on to his head, severing

a blood-vessel in his brain. He died from the effects of his injuries on April 2, 1920.

The fatal accident which occurred to Frank Yakubic, on Aprii 22, in the mine operated by the Canadian Pacific Railway, Department of Natural Resources, at Bankhead, was caused by his being suffocated in a chute. He was bucking coal down No. 14 chute and apparently slipped, and fell into the chute below the counter gangway, and a piece of board which was lying across the chute caught him under the chin, and the weight of the coal pressing behind him pressed him against the board, suffocating him.

The fatal accident which occurred to John Smerek, on May 12, in the mine operated by the Canadian Pacific Railway, Department of Natural Resources, near Lethbridge, was caused by his falling in front of a trip of loaded cars. He was riding, without permission, on a trip of loaded cars which were being hauled by an endless rope, and probably while getting off the trip whilst it was in motion, fell in front of the cars and was crushed by same, receiving injuries from which he died some five hours later.

The fatal accident which occurred to Hugh Howells, on May 12, in the mine operated by the Oliphant-Munson Collieries Ltd., near Basing, Alberta Coal Branch, was caused through his being crushed between railway cars. He was engaged as engineer on the Grand Trunk Pacific Railway, and was switching railway cars into the stripping pit. After putting some cars in place, he got down off his engine to examine some car couplings, and was crushed between two cars, receiving internal injuries, from which he died in the hospital at Edmonton on May 13.

The fatal accident which occurred to James Chalmers, on June 10, in the mine operated by the International Coal and Coke Co. Ltd., Coleman, was caused by a fall, of rock. He was mining coal at the face of a room, when a piece of rock fell from the roof, striking him on the legs, causing a compound fracture of both legs. Death resulted from shock and loss of blood.

The fatal accident which occurred to J. J. Powell, on June 11, in the mine operated by the Canadian West Coal Co. Ltd., near Taber, was caused by a fall of rock. He was driving a horse through the parting on Morgan's entry, when a piece of sandstone fell from the roof, striking him on the back and left thigh, breaking same, from the effects of which he died some two hours later.

The fatal accident which occurred to Adam Campbell, on June 11, in the mine operated by the Saunders Creek Collieries Ltd., at Saunders, was caused by a fall of rock. He was attempting to replace a derailed car which was attached to the hoisting rope; the hoist being started, on signal, pulled the car against a timber knocking same out and causing a cave of rock, which fell on him, killing him instantly.

The fatal accident which occurred to Dimid Cysar, on July 6, in the mine operated by the Hillcrest Collieries, near Hillcrest, was caused by asphyxiation. He was working in room No. 372, and for some unknown reason had gone into room No. 373, which was fenced off, owing to an accumulation of gas at the face. He passed through the fence, and got into the gas, being overcome by same. Death resulted from asphyxiation.

The fatal accident which occurred to F. Bacceda, on July 26, at the mine operated by the Chinook Coal Co. Ltd., near Commerce, was caused by his being suffocated in a slack hopper. He was working taking slack from the hopper to the boiler house, and it was presumed he must have fallen into the hopper below the screens, and became suffocated by the slack.

The fatal accident which occurred to Thomas Brookes, on August 7, in the mine operated by the International Coal and Coke Co. Ltd., at Coleman, was caused through his being crushed between a chute and compressed air locomotive. The locomotive was being used to switch cars in the mine; Brookes stepped on to the front end of the locomotive, when his head was caught between the end and a chute, breaking his neck, from the effect of which he died instantly.

The fatal accident which occurred to John McCrory, on August 25, at the mine operated by the North American Collieries Ltd., near Evansburg, was caused through his falling down the shaft. He had gone up the shaft from below, and was engaged with another man taking empty timber trucks off the cage at the surface landing and it is presumed had not got the truck clear of the shaft before signalling the engineer to lower the cage. The descending cage must have struck the end of the truck, throwing it and him down the shaft, causing injuries from which he died in the hospital at Edmonton on August 28, 1920.

The fatal accident which occurred to Louis E. Jelicour, on September 17, at the mine operated by the Jasper Park Collieries Ltd., was caused through striking his head against a timber. He was loading a mine car, and in turning around struck his head against a piece of lagging, causing a fracture of the skull behind the right ear, which set up paralysis, from which he died on September 28, 1920.

The fatal accident which occurred to J. Rezac, on October 5, at the mine operated by the West Canadian Collieries Ltd., near Blairmore, was caused through a fall of rock. He had been assisting the shot-lighter in connecting up shots at the face of a room, and was going back to a safe place while the shots were being fired, when a cave took place near the face, and a piece of rock, rolling down the chute, struck him on the back of the head, breaking his neck, death being instantaneous.

The fatal accident which occurred to Sam Delli, on November 4, at the mine operated by the McGillivray Creek Coal & Coke Co. Ltd., near Coleman, was caused through a fall of rock. He was working near the face of the water level, at No. 3 slope, when a large cave of rock took place, striking him on the head and burying him, killing him instantly.

The fatal accident which occurred to Efin Hulka, on November 18, at the mine operated by the Bellevue Collieries Ltd., near Bellevue, was caused through a fall of rock. He was bucking coal in No. 10 chute, when a fall of rock took place, which caught him, burying him, and suffocating him.

The fatal accident which occurred to Alfred Berube, on November 18, at the mine operated by the Mountain Park Coal Co. Ltd., Mountain Park, was caused by asphyxiation. He was engaged loading coal from a chute, and for some unknown reason entered a room which was fenced off, owing to an accumulation of gas being at the face. He passed through the fence into the gas and was asphyxiated.

The fatal accident which occurred to Alex. Olshaskie, on November 19, at the mine operated by the Canadian Pacific Railway, Department of Natural Resources, Lethbridge, was caused through his being crushed between mine car and timber. He was driving a horse taking a trip of loaded cars out of No. 23 Butt entry, and ran into a trip being brought out of the face entry, which threw the first car of his trip off the track, crushing him against the timber, causing injuries from which he died shortly aferwards.

The fatal accident which occurred to Richard Walker, on November 19, at the mine operated by the Great West Coal Co. Ltd., near Clover Bar, was caused through his being crushed between empty cars. He was engaged coupling cars on the siding at the foot of the slope when a trip of loaded cars, which was being hoisted up the slope, broke away and ran back, striking the empty cars between which he was standing, fracturing his left leg and causing internal injuries, from the effects of which he died ten hours later.

The fatal accident which occurred to Edward McPhillips, on December 7, at the mine operated by the Acadia Coal Co., near Big Valley, was caused through his falling off the tipple. He was walking on the tipple ahead of a car loaded with rock, and in some manner overbalanced and fell through on to the rock pile below, striking his head and receiving internal injuries, from the effects of which he died ten minutes later.

The fatal accident which occurred to Steve Doenes and J. C. Sippell, on December 15, at the mine operated by the North American Collieries Ltd., was caused through their being burned by an ignition of gas. Sippell, who was the shot-lighter, fired a shot with an electric battery in the place operated by Doenes. This shot ignited gas which must have been present at the time. The flame burned both men severely about the face and hands. Doenes succumbed to the effects of his injuries on December 19, and Sippell on December 23.

The fatal accident which occurred to C. Bonier, on December 21. at the minc operated by the West Canadian Collieries, Ltd., Bellevue, was caused through his falling and fracturing the dorsal vertebrae. He was working at the face of pillar workings, when he slipped and fell, and in doing so must have wrenched his back, causing the above injuries. He died from shock, as the result of the above injuries, shortly after receiving same.

In addition to the above, Mr. James A. Richards, 11009 89th Avenue, Edmonton, is acting in the capacity of General District Inspector of Mines, Telephone No. 3662.

BOARD OF EXAMINERS

The constitution of the board during 1920 was as follows:

As representing:

(a) The Mine Inspectorate:

John T. Stirling, Chief Inspector of Mines.

(b) Managers:

Messrs. Robert Livingstone and Francis Aspinall.

(c) Miners:

Messrs. Evan Morgan and Alexander McLeod.

Secretary:

James A. Richards.

Examinations were held during the year as follows:

For first and second class certificates on May 12, 13, and 14 at Blairmore, Lethbridge, Calgary, Edmonton, Nordegg, and Mountain Park.

For Third Class Certificates at Pocahontas on February 12, at Edmonton April 8, at Evansburg April 9, at Lethbridge on April 7 and 8 and May 3, at Taber April 6, at Blairmore April 8 and 9, at Coalspur April 12, at Calgary April 6 and 7 and September 11, at Drumheller April 8, at Canmore April 12, at Mountain Park April 14, at Nordegg April 14 and November 16.

For Mine Surveyors' Certificates on May 15 at Edmonton, Calgary, Lethbridge, Blairmore and Nordegg.

Thirty candidates presented themselves for First Class Certificates, three of whom were successful; thirty-eight candidates presented themselves for examination for Second Class Certificates, twenty-one of whom were successful; eighty-seven candidates presented themselves for examination for Third Class Certificates, of whom eighty were successful; and twelve candidates applied for examination for Mine Surveyors' Certificates, of whom eight were successful.

During the year there were granted one hundred and ninety-one Provisional Certificates to persons to act as Overmen until they had an opportunity of obtaining final Certificates by examination.
